

**Abstract of the disclosure**

**Immunoassay Apparatus for Diagnosis**

5      Immunoassay analytical test apparatus for allergy diagnosis, which apparatus comprises  
a zone for receiving a sample containing an analyte, a zone for receiving a mobile phase  
(the zone may be the same as the sample receiving zone, or different thereto), a detection  
means for permitting detection of the analyte by immunoreaction, a first flow path for  
flow of the analyte in the mobile phase from the sample receiving zone to the detection  
means, and a second flow path permitting flow of a mobile phase to the detection means.
